

There are 31 records (10 observers) of the race *centralis* from the NW inc 9 from Bumbire Island.

recorded from 37 squares 10.6 %

Status
 ● Presence
 ● Breeding season
 ● Month with eggs

These 20 records from SW of Lake Victoria are a single observer and will be double checked.

The single record from 3504C is from Lake Balangida Lelu in the bottom of the Rift Valley at 1,400m.

These records from the Usambara Mts are surely ID errors for Olive Woodpecker. They will be checked and changed.

Modern terminology is to split eastern birds as a full species for which we have 3 proposed English names. Grey-headed (but this already exists in Europe). Mountain Grey (because that is the case with the nominate Ethiopian population). Eastern Grey which is the most sensible given that *D.goertae* is the western bird and there is no overlap.

from Britton (1980). A common and wide-ranging species of woodlands, wooded grasslands, gardens, forest edges and cultivation with trees at 700-2000 m. The race *centralis* occurs throughout Uganda, in W Kenya north of the equator, including the Turkwell River, Baringo, Barsalinga and Wamba, and in NW Tanzania at Bukoba. The race *rhodeogaster* occurs in N Tanzania from Serengeti NP to Lake Manyara, Nou, Hanang, Chubi and Arusha NP, and in SW and C Kenya north to Kisumu and Murang'a, east to Selengai and Simba.

Grey Woodpecker *Dendropicos goertae*
